

Eric White

I want you to turn this into bullet points for me, nothing overly complicated. My project explores how I use AI tools, specifically platforms AI music tools to expand my creativity and improve my music-making workflow. Instead of replacing my musical creativity, AI acts as a creative assistant that generates melodies, chord progressions, rhythm ideas, and variations that I can edit and refine inside my DAW. The project demonstrates how AI can help musicians overcome creative blocks, expand small ideas into full musical sections, and give them more room to experiment . By the end of the semester I can show you how AI can Be used to help your music The full goal is to make a full Portfolio of different AI's I used to produce my music and how beneficial it is to use AI without fully relying on it just using it as a tool to extend the music that I already made.
